

Number line three-in-a-row game

Resources

- A large 0–100 number line (some children will benefit from having the multiples of 10 labelled; others will only need 0 and 100 labelled)
- A set of place value cards
- Two different coloured pens or pencils

Paired game

Put the place value cards face down on the table (or in two feely bags – one bag for the tens and one bag for the ones). Children take it in turns to pick a tens card and a ones card and combine them to make a two-digit number. They then decide where the number should be placed on the 0–100 line and write the number on the line using the coloured pen/pencil they have selected.

The first child to position three of their numbers in a row wins (e.g. on the example below, the child with the red pen would win).
