

Function blocks

This ITP allows you to create up to three function blocks.

input function output

Each function block has an input, a function and an output.

You input the initial value by dropping a number card on the first input box. Changing the sign or value of the function determines what appears in the output box.

When more than one function block is selected, the output from one function block becomes the input into the next function block.

Input cards 0 to 9 are selected from the numbers at the top of the screen. Cards with larger numbers or decimal numbers are created using the keypad.

click on a number to create a new number card

press and drag cards to the active section

click on a function block or output box to show or hide its values

drop cards onto the first input box

click on the pointers to change this value

click on the sign to change it

output from the first block becomes input to the second block

drop unwanted cards into the slot

use the keypad to create input cards with larger numbers or decimal numbers

Click here to select 1, 2 or 3 function blocks.

Click here to select 1 or two rows of function blocks

Click here to open or close the keypad.

Click here to show unknowns as question marks or letters.

Click here to insert random values and signs into the function blocks.
